Summary — Full stack developer with a proven track record of executing complex projects, enhancing user experiences, and collaborating effectively in team environments.

Experience

Nagios   **July 2024 – Present**

Full Stack Developer

- Product Owner of Nagios Network Analyzer, our flagship networking monitoring product generating $2,000,000 ARR (Annual Recurring Revenue).
- Spearheaded the frontend overhaul for our enterprise logging service, Nagios Log Server, implementing more than 35% of the interface, and advised on developer experience.
- Identified and diagnosed a critical licensing issue for Network Analyzer.

Nagios   **January 2023 – July 2024**

Jr. Full Stack Developer

- Engineered and optimized advanced graphing and CSV export features for a high-value client ($100K+ annual subscription), saving hundreds of hours in export time.
- Collaborated alongside several other developers and played a key role in modernizing NagiosXI's UI, focusing on enhancing user experience through design.
- Orchestrated the migration to support the latest OS versions, adapting software for PHP 8+ despite numerous deprecations.
- Created light mode theme for the modern UI, including theme switching in React components and refactoring CSS files to utilize palette-based variables.
- Engineered dynamic admin banner feature using PHP, MySQL, and jQuery, empowering administrators to display important messages to users.
- Created comprehensive test cases with TestCafe.
- Developed a bulk notification modification feature, streamlining user management and boosting overall satisfaction.

Nagios   **September 2022 – January 2023**

Intern Full Stack Developer

- Developed and implemented a rudimentary search feature for one of the company's core products, which was successfully integrated into the final release.
- Conceptualized and prototyped potential features for multiple products, contributing to the company's innovation pipeline.
- Collaborated with team members to understand product requirements and user needs.
