Summary — Software Engineer with experience architecting and modernizing enterprise monitoring applications. Skilled in React, Laravel, PHP, and Linux development, with a focus on software architecture, product ownership, and delivering maintainable solutions.

Experience

Nagios

July 2024 – Present

Full Stack Developer

- Architected the complete rewrite of Nagios Network Analyzer, designing a modern React, Laravel, and Tailwind application to replace the legacy platform.
- Led development of the Nagios Network Analyzer rewrite, coordinating implementation across the engineering team while mentoring junior developers and maintaining architectural consistency.
- Served as Product Owner for Nagios Network Analyzer, prioritizing features and driving technical direction for a flagship product generating \$2M ARR.
- Developed and delivered a technical presentation and led a hands-on workshop on Nagios Network Analyzer at the Nagios World Conference, educating customers and partners on new capabilities and best practices.
- Contributed over 35%+ of the frontend implementation for the Nagios Log Server modernization effort.
- Modernized NetFlow collection by integrating the latest nfdump and nfcapd releases, improving compatibility and long-term maintainability.
- Identified and resolved critical licensing issues affecting enterprise customers.

Nagios

January 2023 – July 2024

Jr. Full Stack Developer

- Engineered and optimized advanced graphing and CSV export features for a high-value client (\$100K+ annual subscription), saving hundreds of hours in export time.
- Collaborated alongside several other developers and played a key role in modernizing NagiosXI's UI, focusing on enhancing user experience through design.
- Orchestrated the migration to support the latest OS versions, adapting software for PHP 8+ despite numerous deprecations.
- Created light mode theme for the modern UI, including theme switching in React components and refactoring CSS files to utilize palette-based variables.
- Engineered dynamic admin banner feature using PHP, MySQL, and jQuery, empowering administrators to display important messages to users.
- Created comprehensive test cases with TestCafe.
- Developed a bulk notification modification feature, streamlining user management and boosting overall satisfaction.

Nagios

September 2022 – January 2023

Intern Full Stack Developer

- Developed and implemented a rudimentary search feature for one of the company's core products, which was successfully integrated into the final release.
- Conceptualized and prototyped potential features for multiple products, contributing to the company's innovation pipeline.
- Collaborated with team members to understand product requirements and user needs.
